 MTR has been in the fleet maintenance business for 16 years, serving the Colorado Springs, Falcon, Peyton and the Front Range areas. Incorporated in 1996 as Mobile Trailer Repair, MTR has expanded its scope of service and operations that include our new 9000 sq. ft. shop facility currently doing business as, MTR - Mobile Transport Repair. I have assembled a team of personnel that meets and exceeds our customers' expectations that includes the addition of fleet management. Our management and technician team offers and takes pride in a personalized service that no one offers in the corporate climate of today. With MTR you will have the leverage that I believe is necessary for a healthy, productive business relationship.

 What we have done over the years is put together a customized fleet maintenance and management program that tailors to the companies' needs. Each of our fleets represents a different type of business. For example, our fleet that hauls prestress cement walls for buildings and parking structures has an entirely different fleet management program than the fleet that hauls recycled tires. With each fleet, we have a customized program which includes such services as, complete preventative maintenance and repair service in shop and out, fleet management, and custom in-house service. What I mean by in-house is, if a customer has a service need that is particular to that company, MTR has performed, maintained and secured that service need for that customer.

With an emphasis on safety and a perfect safety rating, we can perform some simple safety modification upgrades to a fleet that are not currently in place. MTR meets all the business requirements needed for company compliance.

MTR has a combined experience of over 90 years; all of our managers have over 20 years in the transportation and maintenance industry. Our goal is to provide your business with a highly productive service that will in turn save in transportation costs. We will work closely with your company and customize a fleet management program to meet your best interests. MTR will remain flexible and I am looking forward to implementing a very refined and productive transportation program, together we will meet your business transportation maintenance needs.

Sincerely,
Eddie Lawrence, President/ Chief of Operations, MTR
